

Top Eight Reasons For Having A Maintenance Program

1. Protection

Manufacturers of cooling and heating equipment require that your home comfort system be maintained regularly to keep the factory warranty valid. The Guardian Planned Maintenance offers that protection.

2. Discounts

Guardian Planned Maintenance members receive 15% discount on replacement parts.

3. Lower Operating Cost

Ensure your system is running at its optimal level while avoiding expensive repairs. Additionally, a system that is operating at peak performance will lower your utility costs; for example, by allowing your unit to cycle less frequently and consume less energy.

4. Emergency Service

If you discover a problem with your system, simply call us. Guardian Planned Maintenance members receive preferential emergency service.

5. Annual Inspections

Twice per year, our NATE-certified expert technicians will perform a safety inspection and thorough precision tune-up of your HVAC systems and make necessary adjustments to ensure everything is running smoothly.

6. Peace of Mind

Enjoy the peace of mind knowing that your system is running at peak efficiency and that if anything goes wrong, we are here to help.

7. Hassel-Free Documentation

D&H will track your maintenance and document the service history to keep the manufacturer's warranty valid.

8. Extend the Life of Your System

Performing regular maintenance on your system is one of the most substantial ways to extend the lifespan of your HVAC system. During the maintenance inspection, your system will be checked for possible problems before they turn into major repairs, as well as have a thorough cleaning of parts.

Manufacturers Require It

Manufacturers require using an authorized service center for your planned maintenance. Without proper documentation of service history, the manufacturer might not cover the cost of parts or labor for repairs if your system or any component fails.
